

Cardiac Network, Inc. Signs Memorandum of Understanding with Pacific Innovations, LLC to Complete Development of an Exclusive Technologically Advanced Cardiac Monitoring System

SAN FRANCISCO, February 4, 2010 -- Cardiac Network, Inc. (Other OTC:CNWI.PK) announced today that has signed a Memorandum of Understanding, or MOU, with Pacific Innovations, LLC, a private technology development company, to complete the development of a new technologically advanced cardiac monitoring system exclusively for Cardiac Network.

The new cardiac monitoring device prototype is expected to be demonstrated during the second quarter of 2010. This technology will utilize a combination of advanced technologies not seen in the market today.

The system will also include a user-friendly patient online interface to allow access through wireless and WiFi networks to a secure central monitoring database for purposes of uploading and storing electrocardiogram, or ECG, data measuring electrical activity of the heart.

Under the Licensing Letter of Intent and MOU, the devices will be proprietary, patented by Pacific Innovations, and available to Cardiac Network exclusively. This technology would be made available under healthcare plans and marketed through retail direct-to-consumer channels.

Under an existing joint venture agreement with Med Mobile announced in June 2009, and devices available with its overseas manufacturer, Cardiac Network has the ability to offer with its cardiac devices Personal Emergency Response Systems (PERS) to its patients. PERS devices contain an integrated active GPS system that can activate "panic" alerts to Cardiac Network's 24/7 monitoring station, provide accurate location tracking and get immediate live assistance when and where it is needed. Patients can talk directly with the Cardiac Network monitoring station. In turn, Cardiac Network's medical technicians can communicate directly with a patient's doctor or emergency response team.

Cardiac Network anticipates announcing further details of the manufacturing and future sales of its new products and services by the end of the first quarter of 2010.

About Cardiac Network, Inc.

Cardiac Network, Inc. is a medical technology company providing cardiac monitoring and diagnostic services to general practitioners and specialist physicians, for the investigation of patients with abnormal cardiac rhythm and function. The current service uses unique transtelephonic (by telephone) cardiac recorders that monitor and provide diagnostic

information to physicians and their patients. Cardiac Network also offers its services to individuals which help them quickly determine if they are having potential cardiac problem so they can obtain immediately needed medical treatment.
